

Press release

Internet Telephony now for everyone

Mainz, Jan.25, 1999 – I-p-tel.de will present its revolutionary new sound card "Sound4Tel" at CeBIT'99 in Hall 6 Booth 48. This PC card makes it possible to call from phone to phone over the Internet with the same voice quality as classical telephone calls. Internet calls can be placed easily by everyone from any standard analog phone connected to the PC.

The advantages of speaking over the Internet are convincing: International destinations and cellular phones can be called at substantially cheaper rates. Companies can handle their interoffice calls free of charge over their wide area network and jointly edit their documents with application sharing.

The Sound4Tel cards are PTT approved for Europe and the US and can be ordered online at i-p-tel.de at the introductory price of USD 79.
